CO1 – ASSESSMENT 02

CONCEPT MAP ASSESSMENT

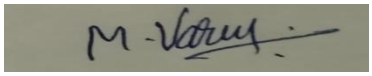

Course Faculty : Dr. M. MAYURANATHAN
Course Name : Ethical Hacking
Course Code : ITA1440
Slot : Slot B
Total Marks : 100

CO1:

Apply the principle of the foundational concepts of ethical hacking, including types of hackers, ethical principles, legal frameworks, and the role of responsible disclosure in cybersecurity.

Code of Conduct

I M. Vara Prasad/192324251 certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the student

CONCEPT MAP TASK

Create a concept map on the topic "Foundations of Ethical Hacking." Your concept map must show the main concept, key branches, sub-concepts, and meaningful connections between ideas. Use keywords and short phrases rather than long paragraphs. You may prepare it by hand or with a digital tool.

Central Concept: Foundations of Ethical Hacking

Your concept map must include the following branches:

- **1. Types of Hackers –** White-hat, black-hat, grey-hat; their roles and intentions.
- **2. Ethics of Ethical Hacking –** Permission, defined scope, privacy, confidentiality, integrity, and professional conduct.
- **3. Legal Framework –** Authorization, applicable cyber laws, rules of engagement, and consequences of unauthorized access.
- **4. Ethical Hacking Process –** Planning, reconnaissance, testing within the approved scope, documenting findings, and reporting.
- **5. Vulnerability Disclosure –** Responsible disclosure, coordinated communication, giving the organization time to fix the issue, and avoiding unnecessary exposure.
- **6. Security Principles –** Confidentiality, integrity, availability, authentication, and authorization.

Submission Requirements

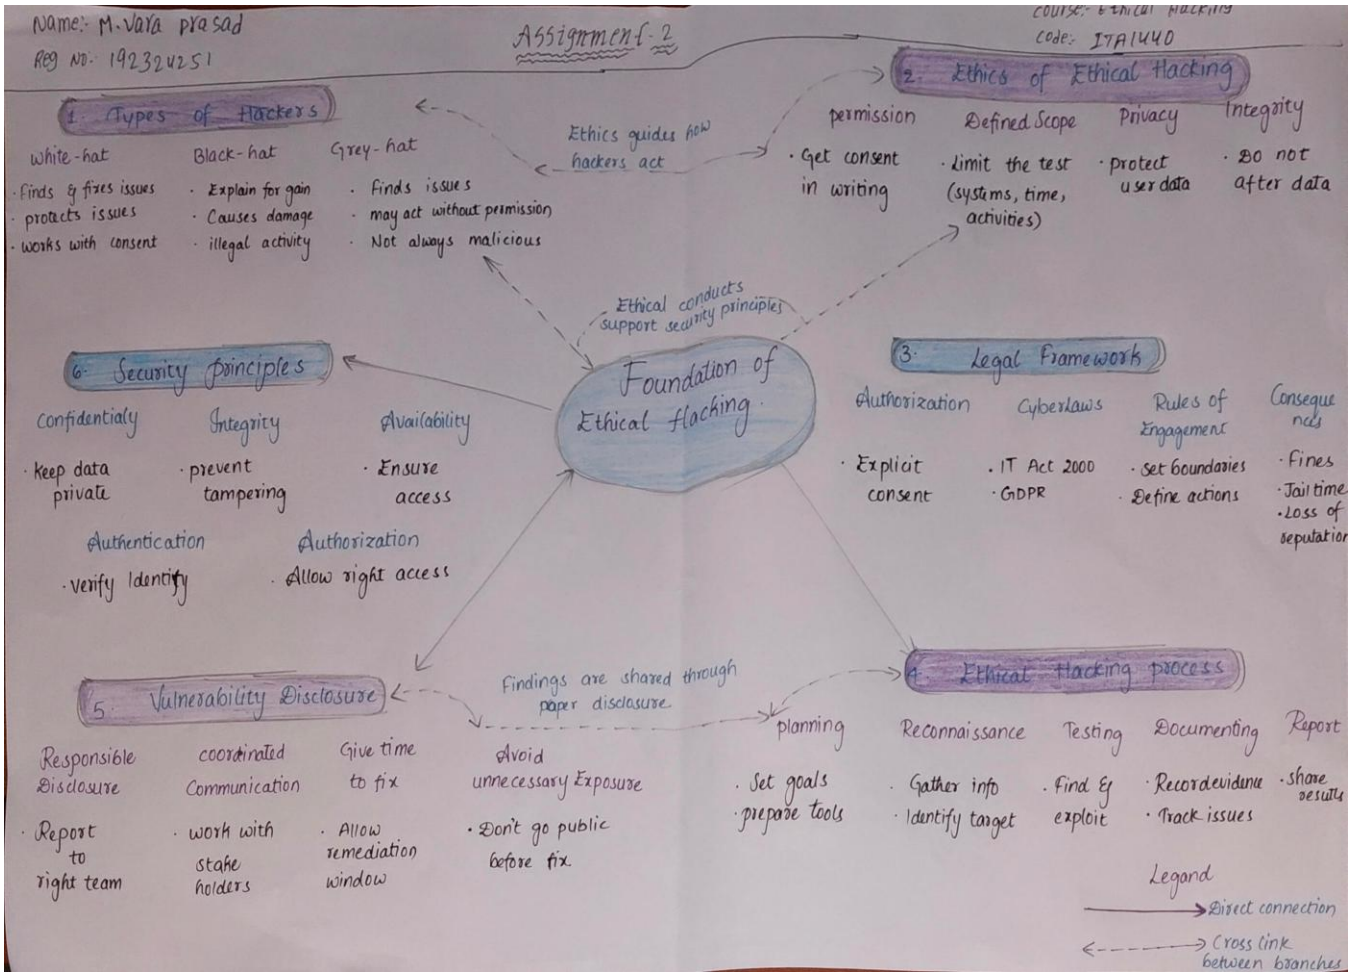

- Place the central concept clearly in the middle or at the top.
- Use labelled arrows or connecting lines to show relationships between concepts.
- Include at least 5 main branches and 2 or more sub-concepts under each branch.
- Include at least 3 cross-links connecting ideas from different branches.
- Use clear labels, readable text, and a logical hierarchy.
- Add one brief real-world example of ethical or responsible vulnerability disclosure.
- Use your own words. Do not copy a complete concept map from an online source.

Student Details

Student Name	M. Vara Prasad
Register Number	192324251
Date of Submission	23/10/2026

ASSESSMENT RUBRICS

Criteria	Weightage	Level 4 (Exemplary)	Level 3 (Proficient)	Level 2 (Developing)	Level 1 (Beginning)
Concept Accuracy and Coverage	25%	Accurately represents all key ethical hacking concepts and relevant sub-concepts.	Represents most key concepts with minor omissions.	Includes some relevant concepts but misses important areas or has inaccuracies.	Concepts are mostly incorrect, unclear, or missing.
Hierarchy and Relationships	25%	Shows a clear hierarchy and meaningful labelled links, including strong cross-links.	Shows a logical hierarchy and mostly appropriate links.	Some hierarchy is present, but links are unclear or limited.	No clear hierarchy; connections are missing or incorrect.
Ethical, Legal, and Disclosure Understanding	25%	Clearly connects authorization, legal responsibilities, ethical conduct, and responsible disclosure.	Shows good understanding with a few gaps.	Shows basic understanding but some links or explanations are weak.	Shows little understanding of ethical/legal duties or responsible disclosure.
Visual Organization and Communication	15%	Highly readable, well organized, balanced, and uses effective labels and visual cues.	Clear and readable with suitable organization.	Understandable but cluttered, inconsistent, or difficult to follow in places.	Poorly organized, difficult to read, or incomplete.
Example and Originality	10%	Includes a relevant example and expresses ideas clearly in the student's own words.	Includes a suitable example and mostly original wording.	Example is vague or some wording is copied/unclear.	No relevant example or substantial copying.

Name: M. Vara prasad
Reg No: 192324251
Assignment-2
Course: Ethical Hacking
Code: ITA1440
Foundation of Ethical Hacking
1. Types of Hackers
White-hat
Finds & fixes issues
protects issues
works with consent
Black-hat
Explain for gain
Causes damage
illegal activity
Grey-hat
Finds issues
may act without permission
Not always malicious
Ethics guides how hackers act
2. Ethics of Ethical Hacking
permission
Get consent in writing
Defined Scope
Limit the test (systems, time, activities)
Privacy
protect user data
Integrity
Do not after data
Ethical conducts support security principles
3. Legal Framework
Authorization
Explicit consent
Cyberlaws
IT Act 2000
GDPR
Rules of Engagement
Set boundaries
Define actions
Consequences
Fines
Jail time
Loss of reputation
4. Ethical Hacking process
planning
Set goals
prepare tools
Reconnaissance
Gather info
Identify target
Testing
Find & exploit
Documenting
Record evidence
Track issues
Report
share results
5. Vulnerability Disclosure
Findings are shared through paper disclosure
Responsible Disclosure
Report to right team
coordinated Communication
work with stake holders
Give time to fix
Allow remediation window
Avoid unnecessary Exposure
Don't go public before fix
6. Security principles
Confidentialy
keep data private
Integrity
prevent tampering
Availability
Ensure access
Authentication
verify Identify
Authorization
Allow right access
Legend
Direct connection
Cross link between branches
